

GALÁPAGOS

THE ENCHANTED ISLANDS

PRICE FROM
1,899 USD

The Galápagos Islands are not just a tourist destination; they are a scientific treasure and ecological wonder, key to the history of biology. This archipelago, famous for its endemic species like the giant tortoises and blue-footed boobies, offers a unique opportunity to witness the effects of evolution in real-time. It was here that Charles Darwin developed his groundbreaking theory of natural selection by observing how species adapted to their environment in isolation. A visit to Galápagos is a chance to walk alongside wildlife that exists nowhere else on Earth and to immerse oneself in the science, nature, and history that shaped our understanding of life on the planet. The islands also serve as a model for conservation, offering travelers the opportunity to experience a pristine ecosystem that is being actively preserved for future generations.
